List of my papers since 2006

Erik Høg¹²

Niels Bohr Institute, Copenhagen University, Denmark ehoeg@hotmail.dk

ORCID: <https://orcid.org/0000-0002-1715-0713>

Abstract: The following list contains links to about 80 of my papers or reports since 2006, to two earlier ones from 2000 and 2004, to a few where I am a coauthor, and to a few other papers. The papers are in English or Danish, they are scientific or popular on subjects from astronomy to religion, mostly on astrometry and often on historical aspects. The list has three sections: 1) Some of the papers in arXiv, 2) Other papers in English, and 3) På dansk, mest i tidsskriftet KVANT. The sequence in each section is mostly chronological. The list is maintained to serve my own writing, not originally to be made public.

A warning about dropbox: Be aware of the following problem with a few remaining links to my dropbox. Links in my reports have before 2017 often been like : <https://dl.dropbox.com/u/49240691/GaiaRef.pdf> . But in early 2017 the dropbox-company suddenly without warning or explanation made such links invalid. I have then copied all files in dropbox to my institute where they are available as e.g. : <http://www.astro.ku.dk/~erik/xx/GaiaRef.pdf>. Links with ...dropbox... have generally been replaced by <http://www.astro.ku.dk/~erik/xx/qqqq.pdf> but not always. I am sorry for this inconvenience.

1 Some of the papers in arXiv

Papers on **astrometry** and a paper on **astrosociology**:

Høg E. 2014a, The Astrometric Foundation of Astrophysics. Abstract to the Conference Book 2014 of the Danish Astronomical Society and abstract of a review presentation. <http://arxiv.org/abs/1408.2122>

The link given herin to dropbox has become invalid and should be replaced by

Høg E. 2014b2, Absolute astrometry in the next 50 years. Report with updates until 12 June

. 36 pages

<http://arxiv.org/abs/1408.2190>

¹ 2021.04.13 **Conclusion about searching for Høg in arXiv**, important is to search in "All fields" (or Authors) for **full name** Erik Høg. This gives 28 results from 1997-2019, including Erik Hoeg, and no false results! Eric Høg gives only 2 results and not me.

² Searching for Høg, the Danish letter ø can give problems. In arXiv at <http://arxiv.org/> a search on 28 March 2018 for Høg/All papers results in 588 hits with all:hg, no one is mine. Hoeg/All papers gives 6 papers where I am on 4. Høg/Authors gives one paper au:hg and not with me. Hoeg/Authors gives the same 6 papers as Hoeg/All papers. Hog/All papers gives 140 hits, about 25 are mine. Finally, Hog/Authors gives 29 papers, 25 are mine. In conclusion, Hog/Authors was best for search in arXiv. In 2020 on 20 Aug the problems for arXiv persist. **But on 25 Aug. 2020** after advice from arXiv I learnt that **advanced search** is required: Høg, E authors giving 38 hits where 4 are not me. In detail: advanced search; Høg, E all fields; or Høg, E authors; or Hog, E authors are OK. -- **In ADS in 2018** Høg was converted to Hog and both gave 952 abstracts, Hoeg gives 350 and I am on most of these. -- **January 2020:** Searching for Høg with the Danish letter ø works perfectly well on ADS and gives 223 results with E. Høg! - **April 2021:** Search on ADS for Høg, E gives 269 results.

Høg E. 2016, Astrometric accuracy during the past 2000 years - Outdated in 2017

ABSTRACT: The development of astrometric accuracy since the observations by Hipparchus, about 150 B.C., has been tremendous and the evolution has often been displayed in a diagram of accuracy versus time. Some of these diagrams are shown and the quite significant differences are discussed. A diagram with new information on the oldest catalogues is recommended and documented. <http://www.astro.ku.dk/~erik/xx/Accuracy2016.pdf>

Høg E. 2016, Selected astrometric catalogues - Outdated in 2017

ABSTRACT: A selection of astrometric catalogues are presented in three tables for respectively positions, proper motions and trigonometric parallaxes. This report was revised in 2016 with new information about the catalogues before 1730 AD. <http://www.astro.ku.dk/~erik/xx/AstrometricCats2016.pdf>

Høg E. 2017a, Astrometric accuracy during the past 2000 years – Partly outdated in 2020

Placed on arXiv: <http://arxiv.org/abs/1707.01020v1>

ABSTRACT: The development of astrometric accuracy since the observations by Hipparchus, about 150 B.C., has been tremendous and is here thoroughly documented. The evolution has often been displayed in a diagram of accuracy versus time. Some of these diagrams are shown and the quite significant differences are discussed. A diagram with new information on the oldest catalogues is recommended. This report No.7 from Høg (2008) was revised in 2017: <http://www.astro.ku.dk/~erik/xx/Accuracy2017bw.pdf>

Some changes since 2008 stand red in:

(5 additional authors not shown)

Abstract: A new all-sky visible and Near-InfraRed (NIR) space astrometry mission with a wavelength cutoff in the K-band is not just focused on a single or small number of key science cases. Instead, it is extremely broad, answering key science questions in nearly every branch of astronomy while also providing a dense and accurate visible-NIR reference frame needed for future astronomy facilities. For almost... ▾ More

Erik Høg

Erindringer om 50 år med astrometrien, der begyndte ved en høstak syd for Holbæk og førte til bygning af to satellitter. Et videnskabeligt højdepunkt er stjerne-kataloget Tycho-2, der nu er helt uundværligt ved styring af satellitter og ved astronomiske observationer.

Om Erik Høg

På Niels Bohr Institutets hjemmeside:

Landmåling på himlen

Findes i nummer: Kvant 3, 2011

Erik Høg

Der er hidtil kun opsendt en eneste astrometrisk satellit, Hipparcos, og dens observationer fra 1989-93 betød et kvantespring med hensyn til nøjagtighed og antal af stjerner med nøjagtigt målte afstande, egenbevægelser og positioner. I 2013 vil ESA opsende en endnu større astrometrisk satellit, Gaia, som ventes at betyde et nyt kvantespring for astrometrien. Jeg vil i det følgende skildre astrometriens udvikling og dens betydning for astronomien.

Gaia-missionens snørklede tilblivelse

5pp (Download 1.44 Mb) <http://www.kvant.dk/upload/kv-2013-4/kv-2013-4-EH-Gaia.pdf>

Findes i nummer: Kvant 4, 2013

Erik Høg

I december 2013 opsendes en ny stor astrometrisk satellit: Gaia. Den skal ligesom den første astrometriske satellit Hipparcos, opsendt i 1989, måle stjerners positioner, bevægelser og afstande men den bliver én million gange så effektiv. Allerede mens Hipparcos observerede, fødtes idéen til en forbedret satellit. Her fortælles hvordan en række idéer til astrometri i rummet under skiftende projektnavne som 'Roemer' og 'GAIA', og gennem et indviklet forløb med mange fejltagelser, endte med at blive til virkelighed med Gaia-satellitten.

2012: Universets begyndelse

Af Erik Høg, Peter Laursen, Johan Samsing, Niels Bohr Institutet - En artikel i Kvant, marts 2012

Artiklen beskriver Universets udvikling siden Big Bang for 13,7 milliarder år siden.

6pp <http://www.astro.ku.dk/~erik/xx/kv121-EH-universets-begyndelse.pdf>

Hjørnesteinen Gaia er i bane

Af Erik Høg, Niels Bohr Institutet - En artikel i Kvant, september 2014

Den 19. december 2013 blev Gaia anbragt i en bane 1,5 millioner km fra Jorden til astrometrisk måling af en milliard stjerner. De første målinger viser, at målsætningen for missionen vil holde, selvom der var alvorlige problemer i indkøringsfasen.
